December 22nd

0.1 Summary

What I accomplished today:

- 1. Register for Coinbase
- 2. Bought 99 dollars of Bitcoin
- 3. Register for GDAX
- 4. download historical prices of all the assets traded on GDAX

Here are some trade ideas:

- 1. correlation between bitcoin vs litecoin, etherium, twitter feed
- 2. figure out if you buy assets at prices p and q, it is actually locked at those
- 3. figure out how frequently you can buy with bots
- 4. read about basic volatitly strategies
- 5. get historical prices of all the assets

- 6. run some sort of correlation, how do you know if it's spurious?
- 7. run twitter feed corelation, figure out the in time between positive vs negative sentiment and think about when to place orders
